The provided CSV file contains data with five columns: frame, X_thumb, Y_thumb, X_index, and Y_index. The first column represents the frame number. The second and third columns represent the x and y coordinates of the thumb sticker, respectively. The fourth and fifth columns represent the x and y coordinates of the index finger sticker, respectively. This data comes from a subject performing the MDS-UPDRS finger tapping test, with stickers fixed to the thumb and index finger. The subject was instructed to tap the index finger on the thumb to perform continuous finger tapping. A 10-second segment from this activity was selected for analysis. Cameras recording at a frame rate of 240 frames per second (fps) captured the movement, employing a tracking technique to record the x and y coordinates of the stickers on the thumb and index finger in each frame throughout the 10-second interval.

The objective is to score the subject in accordance with MDS-UPDRS item 3.4: FINGER TAPPING based on the selected 10 seconds of continuous finger tapping. The instruction and scoring criteria of MDS-UPDRS item 3.4: FINGER TAPPING are as follows:

“Instructions to the examiner: Each hand is tested separately. Demonstrate the task, but do not continue to perform the task while the patient is being tested. Instruct the patient to tap the index finger on the thumb 10 times as quickly AND as big as possible. Rate each side separately, evaluating speed, amplitude, hesitations, halts, and decrementing amplitude.

0: Normal: No problems.

1: Slight: Any of the following: a) the regular rhythm is broken with one or two interruptions or hesitations of the tapping movement; b) slight slowing; c) the amplitude decrements near the end of the 10 taps.

2: Mild: Any of the following: a) 3 to 5 interruptions during tapping; b) mild slowing; c) the amplitude decrements midway in the 10-tap sequence.

3: Moderate: Any of the following: a) more than 5 interruptions during tapping or at least one longer arrest (freeze) in ongoing movement; b) moderate slowing; c) the amplitude decrements starting after the 1st tap.

4: Severe: Cannot or can only barely perform the task because of slowing, interruptions, or decrements.

The provided Python file includes a method for calculating the number of taps. Use this method for the analysis and begin by generating a plot of the data.

To determine the subject's score, analyze the provided data thoroughly and give a detailed motivation for the assigned score based on the MDS-UPDRS finger tapping instruction. Print the score using only one number on the last line of your answer, after the detailed motivation.

Based on the analysis of the provided data and the execution of the Python script, here is the detailed motivation for the MDS-UPDRS 3.4 score.

The script first loaded the 975 frames of data, which corresponds to a **total duration of 4.06 seconds** (at 240 fps), not 10 seconds. In this 4.06-second window, the peak-finding algorithm detected **11 distinct taps**.

Analysis of Tapping Performance

To score the subject, we analyze the speed, rhythm (hesitations), and amplitude. The instructions are to evaluate a 10-tap sequence.

1. **Amplitude (Size of Taps):** The normalized amplitudes for the first 10 taps were:

[0.74, 0.94, 0.92, 0.79, 0.72, 1.00, 0.79, 0.72, 0.60, 0.74]

- This shows a **highly irregular amplitude**.
- The performance does **not** show the characteristic *decrementing* amplitude seen in criteria 1(c), 2(c), or 3(c). Instead, the amplitude is erratic: it goes down (taps 3-5), then makes a very large tap (tap 6, at 1.00), then falls off (taps 7-9), before increasing again (tap 10). This indicates poor motor control and inability to maintain a consistent "big as possible" tap size.

2. **Rhythm (Speed and Hesitations):** The time *between* the first 10 taps (the tap periods) provides the most critical data for scoring.

◦ **Tap Periods (in seconds):**

[0.41, 0.38, 0.43, 0.32, 0.44, 0.32, 0.43, 0.32, 0.37]

- A "Normal" (Score 0) performance would have a very consistent period. This is not seen.
- This is not a "regular rhythm... with one or two interruptions" (Score 1).
- This is not a regular rhythm with "3 to 5 interruptions" (Score 2).
- The rhythm is *fundamentally irregular* (arrhythmic). It alternates between a "slow" tap (0.41s, 0.43s, 0.44s) and a "fast" tap (0.38s, 0.32s). There is no "regular rhythm" to interrupt; the entire sequence is irregular. This pattern represents a break in rhythm for *every single tap*.

Scoring Conclusion

The scoring criteria are based on the *worst* feature.

- The amplitude is erratic, not just decrementing.
- The rhythm is not just "interrupted"; it is "arrhythmic." This constitutes "more than 5 interruptions during tapping," as every one of the 9 measured periods is part of an irregular pattern.

This performance perfectly matches criterion 3(a):

- **3: Moderate:** Any of the following: a) **more than 5 interruptions during tapping...**

The subject's performance is not "Slight" (1) or "Mild" (2), as the rhythm is completely irregular, not just "interrupted" a few times. It is "Moderate" (3) due to this profound arrhythmia.
